

F10[®]

DISINFECTANTS

HIGH PERFORMANCE WITH SAFETY

Protect herpetological species from disease with F10 Disinfectants

- **Proven effective** against all known types of pathogen. Use F10 to kill E.coli, enterobacteria, salmonella, pseudomonas, pasteuria, coccidia, cryptosporidium, and more.
- **High levels of safety.** At recommended dilutions* the disinfectants[^] can be used around reptiles and left to air-dry[#], with no need to rinse.

Biosecurity with F10 products is therefore an easy, and highly effective process.

F10 Reptile Disinfectant Ready to Use

This convenient disinfectant is ready to use straight from the bottle (F10CL pre-diluted at 1:50). Just apply and leave to air-dry[#], providing long-lasting disinfection.

Ideal for the routine disinfection of tables, floors, vivariums, equipment, bowls, baths, and more.

F10CL Reptile Disinfectant

F10 Reptile Disinfectant in a concentrated form.

Simply dilute* at the required rate, apply, and leave to air-dry[#] for long-lasting control of all types of pathogen.

F10 Disinfectant Wipes

These biodegradable wipes are impregnated with F10 disinfectant. Ideal for easy and effective cleaning and disinfection of hands, objects and surfaces.

* - if pooling occurs on hard surfaces, it is advised to wipe up this excess solution before (re)introducing animals to the area; if using a product with an added detergent, rinsing is recommended to remove any soap residue.

Why choose F10®

F10's unique combination of core actives achieves the widest spectrum of activity, killing all known types of pathogens - **bacteria, viruses, fungi & spores**.

At recommended dilutions*, the F10 range is proven safe^ with no reported adverse effects on people, animals or equipment.

- **Non-corrosive**
- **Non-irritant**
- **Biodegradable**

With **independent test data to support all claims**, you can be confident you are using the best to keep you and your animals safe.

That is why the F10 range is widely used and recommended by herpetological experts.

SELECTED OTHER PRODUCTS IN THE F10® RANGE

Whatever the situation there is a product in the F10 range which can help you to eliminate all pathogens, quickly, easily and safely. Below are some more of the products available - to see the full F10 range visit www.meadowsah.com/f10.

F10SC Veterinary Disinfectant

A more concentrated form of the F10CL Disinfectant (see over and dilutions* below).

F10 Hand Gel

A waterless, antimicrobial hand sanitiser. It is much kinder to hands than other gels as pathogens are killed by the F10 actives, so its alcohol content can be much lower.

F10SCXD Veterinary Disinfectant/Cleanser

The F10SC Veterinary Disinfectant with added detergent to provide a 'one-step' product for both cleaning and disinfection*#.

F919SC Biofilm Remover

A heavy-duty 'degreaser', with an emulsifying action, to remove from hard surfaces the 'biofilms' that can harbour micro-organisms.

^ - F919SC is not based on the F10 core actives so does not have the same attributes as the other products listed. It does not disinfect (but removing biofilms makes subsequent disinfection more effective). It **should not** come into direct contact with users or their animals - after application it should be rinsed off rather than 'air-drying'.
