

The F10 product range

The F10 product range is a collection of Environmental and Treatment products based around a highly effective antimicrobial active.

It is used in many of the world's leading veterinary hospitals and is widely recognised as being a highly effective means to keep you, and the animals in your care, safe from disease.

The Environmental products are outlined here.

The Treatment products include: specially formulated skin ointments and shampoos, with and without insecticide; a germicidal wound spray with insecticide to control and treat fly-strike; and an antiseptic solution with a variety of applications including nebulisation.

For further information on the F10 range visit: www.meadowsah.com

Why choose F10?

Safe and Effective

F10's unique combination of core actives achieves a wide spectrum of activity, killing all known types of pathogens - bacteria, viruses, fungi and spores.

At working dilutions, the F10 range is proven safe with no reported adverse effects on people, animals or equipment.

- Non-toxic
- Non-irritant
- Non-corrosive
- Biodegradable
- Aldehyde free
- Chlorine free
- Chemically stable
- Free rinsing

Confidence

With independent test data to support all claims, you can be confident you are using the best to keep yourself and your loved ones safe.

F10 HAND DECONTAMINATION

F10 HAND SCRUB

A highly effective hand wash, based on the F10 actives. It ensures a high level of decontamination, and with added emollients it is kind to hands, so is especially good for repeat use and those with dry or sensitive skin.

F10 HAND GEL

A waterless, high emollient and low-alcohol** antimicrobial hand sanitiser. Safe and effective, ideal for when washing facilities are not available.

F10 HAND FOAM

A pocket-sized, waterless, alcohol-free** hand sanitiser effective against all types of pathogen. As it is a foam, rather than a gel, it is less messy and kinder to skin than some other hand products.

F10 2-IN-1 HAND CREAM

A long-lasting, non-oily, 2-in-1 moisturiser and sanitiser. It provides effective skin hydration whilst also combatting all commonly occurring bacteria.

** - As the F10 actives in the products kill all types of pathogens, a high alcohol content is not needed, and therefore reduces the damage to skin.

F10 DISINFECTANT PRODUCT RANGE

HIGH PERFORMANCE
WITH SAFETY

F10 VETERINARY DISINFECTANT RANGE

F10SC VETERINARY DISINFECTANT F10CL VETERINARY DISINFECTANT

F10 Veterinary Disinfectants are the choice for high level disinfection. They are proven effective against all known types of pathogen. At recommended dilution rates* they won't damage equipment and are safe to use in the presence of animals so can be applied to surfaces and left to air-dry.

F10 DISINFECTANT READY TO USE

A convenient ready to use spray of diluted F10 disinfectant (F10SC at 1:250). Just spray on and leave to air-dry, with no need to wash off.

F10SCXD DISINFECTANT CLEANSER F10CLXD DISINFECTANT CLEANSER

The XD range has the same broad spectrum of kill* as F10SC and F10CL Veterinary Disinfectants but with added detergent to provide a 'one-step' product for cleaning and disinfection. Ideal for walls, floors and hard surfaces.

In some instances rinsing after use is advised to remove any soap residue.

F10 ODOUR ELIMINATOR

A ready to use spray of F10SC with added pine fragrance. It disinfects and kills the source of smells instead of just masking them. Safe for carpets, soft furnishings, and hard surfaces.

F10 DISINFECTANT WIPES

A convenient pack of 100 biodegradable single use wipes impregnated with F10 disinfectant for instant clean up and disinfection of hands and surfaces. Safe, effective and convenient.

F919SC BIOFILM REMOVER/DEGREASER

An adjunct to the F10 range used for the removal of biofilm which can harbour a build-up of micro-organisms.

N.B F919SC does not have the same safety specifications as the F10 range and should always be used with care and be washed off surfaces after use.

F10 REPTILE DISINFECTANTS

The ideal range for reptile care, formulated to kill the pathogens that specifically affect reptiles.

At recommended dilutions it is highly effective, but won't damage equipment and is safe to use around pets. Use on vivariums, bowls, and surfaces to kill bacteria, viruses, and fungal spores.

F10CL REPTILE DISINFECTANT & F10 REPTILE DISINFECTANT READY TO USE

F10 Reptile Disinfectant in either a concentrated*, or pre-diluted, ready to use, form. Use, and then leave to air dry to provide long lasting disinfection.

Should you choose SC or CL?

Whichever you use, the disinfection performance is the same. Some users prefer CL as the dilution rates require less precision; others use SC as it is more concentrated so is a smaller bottle size. 1L of SC is the equivalent of 5L of CL. Choose whichever is best for you.

F10 AVIAN DISINFECTANTS

The ideal disinfectant range for avian care, whether for routine disinfecting of cages, bowls, perches etc, or for deeper cleaning.

Formulated to kill all known types of pathogens - including those affecting avian species, such as Circovirus (PBF), Avian 'flu, Aspergillus and more - yet won't damage equipment and safe to use around your birds.

F10CL AVIAN DISINFECTANT

F10 Avian Disinfectant in a concentrated form. Simply dilute*, wash or spray, and then leave to air dry with no need to wash off, providing long lasting disinfection.

F10 AVIAN DISINFECTANT READY TO USE

This convenient disinfectant is pre-diluted (F10CL at 1:50) and ready to use straight from the bottle. Just wash, or spray on, and leave to air-dry, with no need to rinse off.

F10CLXD AVIAN DISINFECTANT CLEANSER

An F10 Avian Disinfectant Concentrate* with added detergent. Provides an easy, 'one-step' process, for cleaning and disinfecting hard surfaces - cage floors, bird rooms, etc.

Due to the detergent content, in some instances rinsing after use is advised to remove any soap residue.

*RECOMMENDED DILUTION RATES

SC = Super Concentrate CL = Concentrated Liquid

General disinfection	High level disinfection
SC - 1:500 (2ml in 1L of water)	SC - 1:250 (4ml in 1L of water)
CL - 1:100 (10ml in 1L of water)	CL - 1:50 (20ml in 1L of water)
